Subject: CES: 19 of 20 Aboveground Storage Tanks

Mr. Shurn:

I have been working with Lonestar Ecology and they have indicated an interest in the tanks located within the North and South Tank Farm (19 Tanks). They have indicated that although they believe that some of them may be useful for their operations depending on the integrity of the tanks and their ability to repair. They indicated that the cost to remove them from the site and relocate them will be expensive and as such they are not offering any payment for the tanks. They indicated that they will make the determination on-site of the acceptability and if not acceptable, they will scrap on-site and send off for recycle.

I understand that it is in all of our best interest to get these tanks removed/recycled/reused as best we can. I would like to see what the process would be to be able to move forward on the ability to facilitate this action if possible. The timing of this may become an issue and as a result may not work out while EPA is still on-site

doing cleanup actions but I would like to see what can be done to get this accomplished. The coordination of this may need to be pushed when the PRP group is onsite but I would like to get it accomplished while EPA is onsite.
Thank you for your time.

Gary Moore
